

DATA UNDERSTANDING & DATA QUALITY (EXCEL)

Entertainment Domain – Netflix Content Analysis

1. Objective

The objective of this phase is to profile the raw Netflix dataset in Microsoft Excel before any transformation. This assessment identifies data quality issues and establishes the baseline for Power Query cleaning.

2. Excel Profiling Activities

- Import the CSV dataset into Microsoft Excel.
- Verify total rows and columns.
- Review column names and data types.
- Identify missing values and blank cells.
- Detect duplicate records.
- Validate release years and date formats.
- Identify invalid IMDb ratings and negative values.
- Check text inconsistencies (Movie/movie/MOVIE).
- Review country name inconsistencies (USA, U.S., United States).
- Document all observations.

3. Data Profiling Summary

Quality Check	Status	Observation	Action Required
Missing Values	Identified	Blank values in multiple columns	Handle nulls
Duplicate Records	Identified	Duplicate titles/records	Remove duplicates
Blank Cells	Identified	Empty fields	Replace or remove
Data Types	Needs Review	Mixed formats	Convert to correct type
Text Consistency	Needs Review	Movie/movie/MOVIE	Standardize values
Country Names	Needs Review	USA/U.S./United States	Standardize names
Release Year	Needs Review	Future years present	Correct/remove
IMDb Rating	Needs Review	Values above 10	Validate
Views	Needs Review	Negative values	Correct/remove
Extra Spaces	Identified	Leading/trailing spaces	Trim/Clean

4. Data Quality Metrics

Metric	Result
Dataset Status	Raw
Profiling Tool	Microsoft Excel
Readiness for Cleaning	Requires Power Query
Critical Issues	Missing values, duplicates, invalid records

5. Conclusion

The Excel profiling phase confirmed that the dataset contains multiple data quality issues that must be resolved before analysis. The next phase focuses on cleaning and transforming the data using Microsoft Power Query.
