

BUSINESS INSIGHTS & RECOMMENDATIONS

Entertainment Domain – Netflix Content Analysis

1. Objective

This document summarizes the key findings obtained from the Netflix dashboard and provides business recommendations based on the analyzed data. The insights are intended to support strategic decision-making related to content planning, acquisition, and portfolio management.

2. Business Insights

1. Movies and TV Shows can be compared to understand the overall content mix.
2. Genre distribution highlights the categories with the largest content library.
3. Country-wise analysis identifies the major contributors to Netflix's catalog.
4. Release-year trends reveal periods of rapid content expansion.
5. Content ratings help understand the target audience segments.
6. Average IMDb ratings highlight higher-quality content categories.
7. Watch hours and views indicate audience engagement patterns.
8. Director analysis identifies creators with the largest content contribution.
9. Interactive filtering enables analysis across multiple business dimensions.
10. The dashboard provides a centralized view of the content portfolio.

3. Business Recommendations

1. Invest in high-performing genres with strong audience engagement.
2. Expand content acquisition in high-performing regions.
3. Maintain a balanced mix of Movies and TV Shows.
4. Prioritize highly rated content for future investments.
5. Review underrepresented genres for diversification opportunities.

6. Monitor yearly content growth to optimize release strategy.
7. Standardize data quality processes before reporting.
8. Track KPIs regularly using the Power BI dashboard.
9. Use dashboard insights to support executive decision-making.
10. Perform periodic data refresh and validation.

4. Expected Business Value

- Improved data-driven decision-making.
- Better visibility into content trends.
- Enhanced reporting efficiency.
- Reliable KPI monitoring.
- Support for strategic content planning.

5. Conclusion

The Netflix Content Analysis project demonstrates a complete business intelligence workflow, from raw data preparation through dashboard development to actionable business insights. The resulting reports enable stakeholders to monitor key metrics and make informed decisions.
